CAREER OBJECTIVE

Aspiring Backend / Full-Stack Developer with strong hands-on experience in Flask, Django, and automation systems. Focused on building scalable, data-driven platforms across trading, healthcare, and workflow automation domains. Actively leveraging real-world projects and hackathons to sharpen system design and problem-solving skills.

PROFILE SUMMARY

Result-oriented Software Engineer with proven experience in backend development, automation, and algorithmic systems. Strong execution across end-to-end product builds — from REST APIs and real-time data pipelines to automation workflows and dashboards. Adept at rapid prototyping, problem decomposition, and shipping production-ready solutions. Actively involved in hackathons and live deployments.

EXPERIENCE

Backend Developer Intern — DOP Agent Software

Automation Company | 4 Months

- Worked as a backend developer on automation systems for post office operations
 - Assisted in building backend logic for data handling, process automation, and workflow execution
 - Gained hands-on exposure to real-world backend development and automation environments
- Tech: Python, Flask, Automation Scripts, Backend Development
-

Backend Developer Intern — Scan2Food

Theatre Technology Platform | 6 Months

- Worked on a Django-based theatre food-ordering platform
 - Contributed to backend modules enabling audiences to order food directly from their seats
 - Assisted in API development, order processing logic, and database interactions
 - Collaborated with frontend and operations teams to ensure smooth order flow
- Tech: Django, Python, REST APIs, Database Integration
-

Independent Freelancer — Backend & Automation Developer

Self-Employed | Project-Based

- Built and deployed custom backend solutions and automation tools for individual clients
- Developed CalculatenTrade.com, a trading-focused platform with calculators and trading utilities
- Created trading tools on demand, including indicator-based utilities (e.g., Alligator-based tools)
- Automated workflows and scripts to improve efficiency for traders and small businesses
Tech: Flask, Django, Python, Trading Tools, Automation, APIs

PROJECTS

CalculateNTrade.com — Live Trading Platform

- Algorithmic trading bots, REST APIs, and automation workflows
- Real-time market data ingestion and strategy execution
 **Live:** <https://calculatentrade.com/>

Hospital Management System

- Queue management system with measurable efficiency gains
- Digital prescriptions and inventory automation
- Flask + SQLAlchemy architecture

Web Automation Suite

- Selenium-based admin automation tools
- Scalable data scraping pipelines using Beautiful Soup

SEO & Chrome Extensions

- SEO analysis and reporting extensions
- Automated keyword and performance tracking tools

EDUCATION

Kurukshetra University

Bachelor of Technology — Computer Science Engineering
2022 – 2026 (*Pursuing*)

CBSE Board

Senior Secondary (XII) — 2022
Secondary (X) — 2020

SKILLS

Backend & APIs: Python, Flask, Django, REST APIs, SQLAlchemy

Databases: PostgreSQL, MySQL

Automation: Selenium, BeautifulSoup, Web Scraping, Workflow Automation

Trading Systems: Algorithmic Trading, Trading Bots, Financial APIs

Frontend & SEO: HTML, CSS, JavaScript, Chrome Extensions, SEO

Tools: Git, GitHub, Google Analytics, Chrome DevTools

ACHIEVEMENTS & HACKATHONS

- **Smart India Hackathon (SIH) — Participant**
 - Multiple hackathon participations with rapid prototyping experience
 - Successfully launched a **live production platform**
 - Delivered **60% operational improvement** in healthcare workflow system
-

INTERESTS

- Financial Markets & Trading Strategies
 - Web Automation & Efficiency Engineering
 - Chess — Strategic and analytical thinking
-
